

ELECTRIC PANEL QUIZ

Directions

The electric Panel Quiz is equipped with 6 cards printed both sides, 12 questions on each side, containing a total of 144 questions and answers on various subjects.

The Electric panel has 24 stations, 12 for questions and 12 for answers.

Place the card selected for play on the two protruding panel guides at the top of the electric panel.

Place the selector tip on the Left on the station of the question to be answered.

Place the selector tip on the Right on the station of the answer you select as the correct answer. If you have selected the correct answer, the panel will transmit a signal. If your answer is not correct continue to select answers until you get the right one.

The electric panel is operated on a 1½ volt dry cell battery. The life of the battery will be prolonged if the selector tips are removed from stations when not in use.

The battery can be replaced when necessary by carefully lifting the electric panel out of the tray, removing the battery and inserting a new one which can be obtained at most dealers.
