PYTHAGORAS
A GAME OF 179 PUZZLES

PYTHAGORAS (545 B.C.) a Greek philosopher and geometrist who is most famous for the theorem that in a right triangle the square of the hypotenuse is equal to the sum of the squares of the other two sides. This is also known as the 47th proposition of Euclid's Elements.

INSTRUCTIONS

This booklet contains 179 puzzles that can be made from the seven plastic pieces. All seven pieces must be used in each design and they must form exactly to the design as shown. All 179 puzzles are possible. Keep a record of the solutions as they are solved. You will derive great personal satisfaction by recording all the solutions, however a bound book is available giving the solutions to all 179 designs by sending 50 cents in coin to the address below to cover printing and mailing costs.
