DIRECTIONS FOR PLAYING
THE GAME OF KENO

Any Number of Persons May Play

One of the players should first be chosen as dealer. He shuffles the cards, and allows each player to draw three, which they lay on the table, face upward, in front of them.

Each player receives from the dealer six cardboard markers. The rest are placed on the table, so that players can supply themselves as their stock runs out.

The numbered pieces should all be placed in the bag, and then the dealer, after shaking them well and without looking in the bag, begins drawing them forth one by one, calling the numbers as he does so, and laying each piece down in full view of the players.

Each player immediately covers with a marker, or markers, any and all of the numbers that he can find in the spaces on his cards, which correspond to the one called by the leader.

The player who first covers all the numbers on one horizontal row of his cards calls out "Keno," and wins the game.

The numbered pieces are then put back in the bag, and it is passed to a new dealer, who is the player on the left of the previous one. He shuffles the cards and allows each player to draw three cards and the game proceeds same as the previous one.

To make the game more interesting, the players may play for "Stakes" by forming a pool with chips, buttons, or beans. Each player is given an equal number of chips before the game starts. He may purchase from the dealer one or more cards, paying one chip for each card. These chips are placed in the center of the table, and constitute the pool. The player who first covers the numbers in any one of his rows calls "Keno" and receives the chips in the pool.

Checking Table

The Dealer should place each piece on the corresponding number as he calls it out. Thus, in case of dispute, it can be ascertained whether any number has been drawn or not. When all the numbers of the Checking Table are covered, it is certain that no number has been missed or lost.
