

# DIRECTIONS FOR PLAYING

HI-HO consists of a set of seven geometrically shaped parts. By moving these seven parts around in different positions, REVERSING THEM when necessary, you can make hundreds of silhouette figures and objects. The entire seven parts are always used in making the figures illustrated.

You can form every letter of the alphabet and every numeral with HI-HO. Try to make the octagon. You will enjoy this test of skill!

Above is an exact reproduction of the different HI-HO parts as they come to you on the special card enclosed.

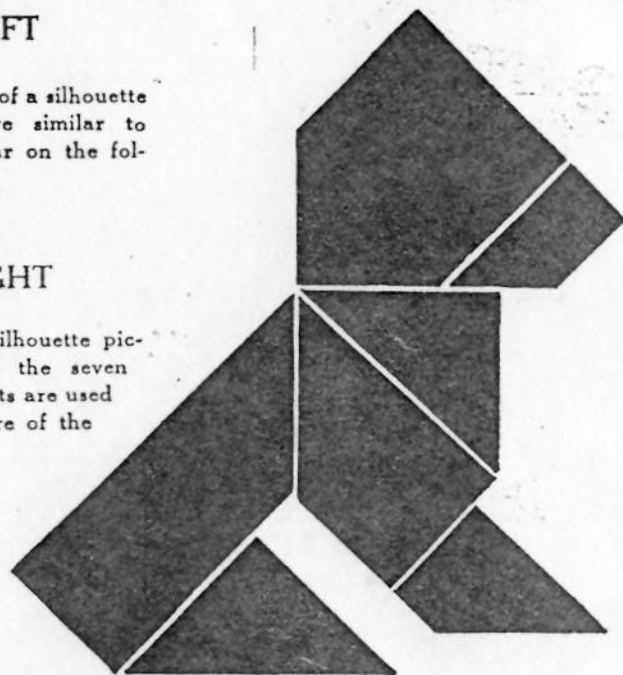

## AT LEFT

Here is an example of a silhouette problem or picture similar to others which appear on the following pages.

## AT RIGHT

Here is the same silhouette picture showing how the seven different HI-HO parts are used in forming the figure of the dog.

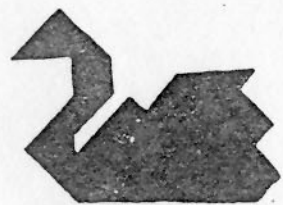

# Test Your Skill on These Silhouette Problems

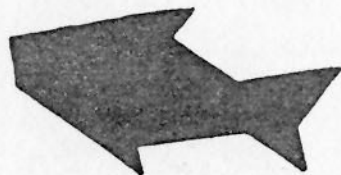

## A BRIEF WORD ABOUT HI-HO

Somewhere in history, as far back as 2,000. B. C., it is related that Archimedes amused himself in his leisure time by playing a game with geometrically formed blocks. If you have visited any museums, you probably have noticed the peculiarly formed hieroglyphics on Egyptian tombs. Some of these angular combinations of these curious hieroglyphics you will find in HI-HO which enables you to form queer, quaint, amusing and geometric figures. A few are illustrated on the next page.

HI-HO is probably one of the simplest yet most fantastic and baffling of puzzles and games ever evolved. You marvel at how many silhouette figures you can construct and originate. HI-HO provides fun and entertainment for every member of the family, and we know you will like it.
